# TROPICAL BIRDING

# Central Colombia: Andean Endemics Paradise

# 23 January - 5 February 2012

**Tour leader: Nick Athanas** 

Report and photos by Nick Athanas

Black-and-gold Tanager, one of the more colorful of the Colombian endemics

Colombia has a mind-boggling birdlist of 1820 species, and one gets the feeling that there is still so much more to be discovered. Much of this marvelous country is relatively unexplored, and new birding sites are being discovered all the time. The country hosts over 70 endemics, most of them from the Andes in the central part of the country. The mountain chain splits into three as it traverses Colombia, and each range and valley holds its own special birds. This year we did a nice circuit through some of the best sites in these mountains, packing in a heck of a lot of birding and almost 500 species into a two-week tour. It was a bit rainier than you might expect for this time of year, but that didn't hold us back much, and we had a very nice haul of endemics headlined by the likes of Gold-ringed, Black-and-gold, and Multicolored Tanagers, Beautiful Woodpecker, Chestnut-capped Piha, Bogotá Rail, and Brown-breasted Parakeet.

The tour started at Chingaza National Park in the cool, high mountains above the giant metropolis of Bogotá. We birded in misty páramo laden with otherworldly *Espeletia* plants, enjoying views of a very

distinctive subspecies of Tawny Antpitta that may deserve to be split as well as a local form of White-chinned Thistletail. Two Bearded **Helmetcrests** other chasing each around. and occasionally perched for a few moments where we could see them. Other small birds like Andean Siskin and Rufousbrowed Conebill (photo left) moved energetically through the bushes. We were delayed a little while at the park HQ since the guy in charge was late, but we took advantage of the time and had very nice views of Pale-bellied Tapaculo nearby. Finally we were through, and spent the rest of the morning and early afternoon birding the temperate forest. The main target here is the endemic Brown-breasted Parakeet, which luckily we found relatively quickly, allowing us to

spend time finding other birds like Black-billed Mountain-Toucan, Rufous Antpitta, Black-capped Tyrannulet, Rufous-breasted and Brown-backed Chat-Tyrants, Red-crested Cotinga, Rufous Wren, Black-crested Warbler, Golden-fronted Redstart, Blue-and-black Tanager, Plumbeous Sierra-Finch, Bluish and Masked Flowerpiercers, Pale-naped and Slaty Brush-Finches, and Agile Tit-Tyrant. After lunch, the skies opened up with a truly epic thunderstorm, we made a hasty retreat out to the park entrance. It was still rather early and the skies were looking less ominous, so we made a side trip to a marsh a bit farther north, where we flushed up a Noble Snipe, scored a great view of Bogotá Rail and saw a few other nice birds before heading back. Traffic in Bogotá is always bad, but today it was an utter nightmare, and what should have been a 1 ½ hour drive turned into three hours of frustration. We arrived a bit late but no worse for the experience, and enjoyed a nice dinner in the hotel.

White-chinned Thistletail in Chingaza National Park

Next morning, we left early to avoid the worst traffic, and headed west back towards the airport. Dawn saw us looking out over a misty marsh, where remarkably one of the very first birds we found was a Striped Owl sleeping in the reeds! It's a very widespread bird, but rarely encountered. Soon after, the morning's target endemics showed beautifully: an Apolinar's Wren singing from among the reeds and a Silvery-throated Spinetail that flitted through branches of tree that had fallen into the marsh nearby. Satisfied with those nice views, we leisurely birded the park for another couple of hours, seeing **Ruddy** Duck, American Coot, Subtropical Doradito, Mountain Elaenia, Brown-bellied Swallow, Rusty Flowerpiercer, Yellow-hooded Blackbird, and Yellow-backed Oriole, then started a fairly long drive down into the Magdalena Valley. A road closure had forced us to change plans a bit, but luckily there was an alternate route that allowed us to look for the same birds. After a big lunch (portions in Colombia are often huge!), we arrived in some dry forest near Ibaqué with two more target endemics in mind, Apical Flycatcher and Velvet-fronted Euphonia. The flycatcher, with its distinctive white-tipped tail, put it an appearance before long, but there was no sign of the euphonia. Other birds were keeping us occupied, though. A singing White-bellied Antbird beckoned to us, and we found away though a fence and into the woods to see this beautiful skulker. While we were there, the deep-throated song of Black-bellied Wren drew our attention and we soon found this handsome wren in a tangle above us. Other birds here included Spectacled Parrotlet, Rufous-tailed Jacamar, Barred Antshrike, Mousecolored Tyrannulet, White-shouldered, Crimson-backed, and Scrub Tanagers, Streaked Saltator, and Black-faced Grassquit. With time running short, we drive a bit farther down the road, but didn't get far before stopping to see a singing Cinereous Becard. Just then, we finally heard a calling Velvetfronted Euphonia and after a fairly long search managed to track it down – it was a dull female! Oh well, I was still happy to see it, and knew we would have more chances over the next couple of days. We spent the night in a nice hotel in Ibagué.

Apìcal Flycatcher, a Colombian endemic we saw in dry forest near Ibagué

After an early breakfast in a 24 hour roadside café, we hopped into some 4WD jeeps and took a short ride up a steep track just outside the city. Only small patches of forest remain here, but they are surprisingly "birdy", and our very first sighting of the morning was a beautiful **Moustached Puffbird**, the only one of the tour. It was soon followed by **White-vented Plumeleteer**, **Rufous-capped Warbler**, **Bar-crested Antshrike**, and **Rufous-naped Greenlet**. We kept working the road for the next few hours, but started to get a little nervous that there was no sign of the two target endemics, **Yellow-headed Brush-Finch** and **Tolima Dove**. A strange looking **Eared Dove** caused a brief false alarm

then disappointment, and an odd looking hummer turned out to be a **Buff-winged Starfrontlet** far below its normal elevational range; at 1700 m it could be the lowest documented record of this species (*photo left*). It was great to see two Cerulean Warblers on the wintering grounds, and tanagers were all over the place including **Bayheaded** and **Blue-necked Tanagers**, and **Black-faced Dacnis**. With little time left a pair of **Yellow-headed Brush-Finches** finally took the bait and came chattering in to check us out. Soon after, the low hoots of a **Tolima Dove** could be heard up off the trail. There seemed little chance to see it, but with nothing to lose I started playback and waited. Amazingly it actually came in, walking back and forth along the branches of a fallen tree in the

understory. It was very dark in there and they weren't great views, but *any* view of this shy and scarce endemic is something to be happy about!

At around 10 o'clock we set off south, crossing the mighty Magdalena River (the longest in Colombia) a couple of times before reaching the small town of Victoria. It was a beautiful afternoon, and we immediately headed up to the small forest reserve of Bellavista near town. Birds were everywhere! It was the best afternoon of the trip by far and we enjoyed every minute of it. Endemics and near-endemics came fast and furious with noisy Sooty Ant-Tanagers (photo right), handsome Whitemantled Barbets, and Beautiful Woodpeckers all seen in auick succession, along with displaying White-bibbed Manakins. We also saw an endemic and seriously endangered primate, the beautiful White-footed Tamarin; this reserve is one of its strongholds. With most of our targets in the bag, we enjoyed some easy birding the rest of the afternoon, seeing (among others) Blue-chested Hummingbird, Red-rumped Woodpecker. Pale-breasted Spinetail. Straight-billed Woodcreeper, Long-tailed Tyrant, Piratic Flycatcher, Blackchested Jay, White-thighed Swallow, Black-faced Tanager, Swallow Tanager, Orange-billed Sparrow, as well finally seeing a male Velvet-fronted Euphonia. We heard a distant Tody Motmot, but sadly we could not locate it.

It was a darn good thing we had such a great afternoon, since next morning dawned misty and rainy. Birding was very quiet and difficult. The **Buff-rumped Warblers** seemed to love the rain and were everywhere, but there was no sign of the motmot or our other few remaining targets. We did manage to see a few birds like **Violet-crowned Woodnymph**, **Red-crowned Woodpecker**, **Plain Xenops**, **Western Slaty-Antshrike**, **Golden-faced Tyrannulet**, and **Scaly-breasted Wren** before the rain got heavier and we decided to bail out and head off early to Rio Claro. All of our targets could be seen there as well, and the weather might be better. Fortunately it was; it was another beautiful afternoon. The Rio Claro area is famous for its Oilbird caves, and after lunch we set off down into a small reserve protected by a local farmer, accompanied by a noisy family of **Band-backed Wrens**. We sloshed our way down a streambed towards the cave, stopping to see a singing **Antioquia Bristle-Tyrant** (*photo left*). This is a very scarce

endemic only described to science in 1988; it usually stays way up in the canopy, and we were lucky to see it so well. Other than the bristle-tyrant, the birding was very quiet on the way to the cave, and we made good time. It was well worth getting our feet wet to be able to go inside and see and hear the **Oilbirds** flying around the cave giving their otherworldly calls and echolocation clicks. There was one active nest in view, but we could only see a very small part of the cave and there were probably many more just out of sight. Oilbird was one of the four birds in a four-way tie for "bird of the trip".

Looking out of the oilbird cave towards the forest

Heading back to van, we found flock of swifts with White-collared, Short-tailed, and Band-rumped Swifts as well as Channel-billed Toucan, Panama Flycatcher, Lesser Kiskadee, Plain-colored Tanager, Spot-breasted Woodpecker, and Crested and Chestnut-headed Oropendolas. It was getting late, but we had a bit of time birding near the Rio Claro canyon, seeing Bay Wren and Dusky-faced Tanager before calling it a day.

Next morning we birded along the scenic Rio Claro Canyon. The beautiful rainforest here was full of birds, and seemed like there was always something to look at. We found one of our last remaining targets for the area without too much trouble, the recently split Magdalena Antbird (photo right). Other birds included Double-toothed Kite, Rufous-breasted, Long-billed, and Stripe-throated Hermits, White-tailed and Gartered Trogons, Barred Puffbird, Cinnamon Woodpecker, Cocoa Woodcreeper, Pacific Antwren, Chestnut-backed Antbird, Sootyheaded Tyrannulet, Olivaceous Flatbill (building a nest), and Fulvous-vented Euphonia.

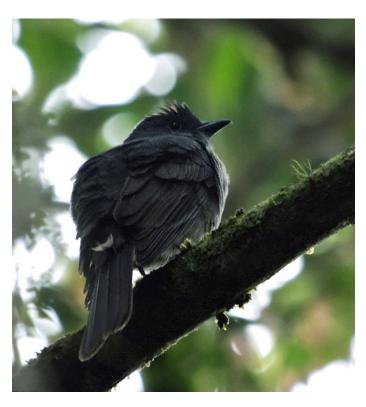

In late morning, we settled in for one of the longest drives of the trip, though luckily we could break it up with a terrific stop at wetlands right along the main Panamerican Highway. Hulking Northern Screamers were everywhere, seemingly not bothered by the huge trucks roaring by every minute. Even though we were here less than an hour, we saw a bunch of birds that we had nowhere else on the tour, such as Cocoi Heron, Bare-faced Ibis, Yellow-billed and Large-billed Terns, Lesser Yellow-headed Vulture, Black-collared Hawk, Crane Hawk, a very unexpected Long-winged Harrier, Pale-vented Pigeon, Chestnut-fronted Macaw (in a nest hole), Blue-and-yellow Macaw, Yellow-chinned Spinetail, White-headed Marsh-Tyrant, and Red-breasted Blackbird. Even our lunch stop was productive, with bold Bicolored Wrens coming right into the restaurant and a Pied Water-Tyrant at the edge of a little pond. A pair of Carib Grackles was very unexpected; they are rapidly expanding their range in Colombia, and this was by far the farthest south in the Magdalena Valley that I had ever seen them. After lunch, we drove up into the northern part of the Central Andes for several more hours on some of the windiest roads in all of Colombia, stopping to see the first of many Colombian Chachalacas in late afternoon, and then a White-tailed Nightjar at dusk. We arrived at the lodge in the Chestnut-capped Piha reserve a few minutes later to the sounds of a calling Stygian Owl – we tried for a few minutes to call it in without success, so decided to leave it for another night.

The Piha reserve protects a very important patch of forest in the northern edge of the Central Andes. There are terrific birds here, but it is tough, forest trail birding targeting shy and secretive birds, which is why we devote two full days here. The forest is very dark early in the morning, so there's no need to get up ridiculously early. Our first morning was very cloudy, so after breakfast, we spent a few minutes watching the feeders, waiting for it to get a little Hummers included Black-throated Mango, Green-crowned Brilliant, Green-crowned Woodnymph, Andean Emerald, Steely-vented Hummingbird, and Purple-throated Woodstar (photo right), while Yellow-rumped Tanager and Black-billed Thrush feasted on bananas. After about 20 minutes, we walked the short distance to the start of the trail, having our first of several encounters with Chestnut-capped Brush-Finch before being distracted by a calling Parker's **Antbird**. A convenient side trail led straight to them, and we enjoyed great views of a pair foraging in a tangle. This species, a Colombian endemic, was only described in 1997 and was named in honor of

the late Ted Parker. Soon after we had our first **Red-bellied Grackle** – this beautiful velvet and scarlet Colombian endemic is one of favorites and I never tire of seeing it. We ended up seeing several more times on the trip. We worked our way slowly up the trail, finding **White-crowned Tapaculo**, **Ochrebreasted Antpitta**, **Wing-barred Piprites**, **Three-striped Warbler**, **Ornate Flycatcher**, **Bronze-olive Pygmy-Tyrant**, and **Sooty-headed Wren**, then found a mixed species flock that had the endemic **Multicolored Tanager**. It was staying high up in the canopy and it took a while before we finally had nice looks at this spectacular endemic. Soon after, a **Chestnut-capped Piha** came in very briefly, but only a couple of the group saw it – more effort would be required! We had more flocks as we went up the trail, with **Red-headed Barbet**, **Red-faced Spinetail**, **Buff-fronted Foliage-gleaner**, **Wedge-billed** and **Olive-backed Woodcreepers**, **Slaty Antwren**, **Plain Antvireo**, **Uniform Antshrike**, and finally a gorgeous **Purplish-mantled Tanager** (we had great luck with this bird on the tour, finding it also at two other sites). After a field lunch, we headed back down the trail. It had gotten quiet in the afternoon, but

we still had one fantastic sighting of an enraged **Chestnut-crowned Gnateater** at very close range — such a good view of this normally skulking bird that it tied as one the top birds of the trip.

An unbelievably thick fog descended in the afternoon, which made it hard to see anything. We did managed to see some more Whitemantled Barbets and a pair of Goldencrowned Warblers before giving up and heading back to the feeders. Luckily, the fog cleared at dusk, and we finally managed to convince the stubborn Stygian Owl to come in to where we could see it. Like the Striped, it's a widespread but rarely encountered species that was enjoyed by all!

The next day dawned even cloudier, and we were sure it was going to pour down, but amazingly it never did. We didn't see as much that morning, but did nail down a singing **Chestnut-capped Piha** (photo left) for a nice

long view, with Scaled Fruiteater and Brown-billed Scythebill in the same spot. Birding got a lot slower after that, and we only found a few "new ones" the rest of the morning, such as Lineated Foliage-gleaner, Striped Woodhaunter, and Collared Trogon. Stiles Tapaculo was totally unresponsive and we never even had a glimpse of it despite hearing it a dozen times or more, but they can be like that. We birded along the road in the late afternoon, a nice break from the tough trails. We had a few tanagers like Specked and Black-capped Tanagers, and had some glimpses of an uncooperative Pale-eyed Thrush before fog once again ended the session. We returned to the lodge and watched the feeders, seeing more Scrub Tanagers and finally locating a distant Wattled Guan that was singing in a tree way up the ridge – a nice bird to end the day with.

Scrub Tanagers were frequent feeder visitors at the Piha reserve.

The drive from the Piha reserve to the Tangaras Lodge on the west slope of the Andes was the longest of the trip. We started by birding forest patches along the road below the lodge, soon finding **Blackheaded Brush-Finch**, a near-endemic that was recently split from Stripe-headed Brush-Finch. We saw a few other birds en route, such as **Olivaceous Piculet**, **Yellow-crowned Tyrannulet**, **Black-winged Saltator**, **Ruddy-breasted Seedeater**, **Black-headed Tody-Flycatcher**, and **Long-billed Starthroat**, but it was mostly a travel day. We arrive at the new lodge in late afternoon, though only had time to see some common birds coming to the feeders such as **Rufous-tailed Hummingbird**, **Hepatic Tanager**, and **Flame-rumped Tanager**.

It poured down with rain all night, and we awoke to darkness as the power had gone out. This region is one of the wettest on the planet; according to NOAA, the nearby town of Lloró currently holds the record with an average annual precipitation of 524 inches (13300 mm)! Even though February is the "driest" month of the year, it still rains most days, and today was certainly no exception. It was a soggy morning, but in areas where rain is so common, the birds just have to deal with it, and we did the same. We first birded along the road finding Sharpe's Wren, Brown Inca, a gorgeous pair of Chestnutbreasted Chlorophonia, and the first of the many tanagers that the reserve is so known for: Blackand-gold Tanager, Glistening-green Tanager, Metallic-green Tanager, and Golden Tanager. We started up the main train trail in the reserve, stopping to see a nesting pair of White-headed Wrens, and then found a fruiting tree that was just loaded with birds. Emerald and Crimson-rumped Toucanets were both sharing the tree, along with Black and Andean Solitaires, Orange-breasted Fruiteater, and Golden-winged Manakin. As we went farther up the trail, the rain started again and we heard a low rumble that sounded like a landslide. Soon we reached the source of the noise – a spot where the trail cut across an old landslide. More earth had come down a few minutes before right over the trail. While it looked passable, we thought it was wise to wait until the rain stopped before crossing. We birded back down the trail to the road, stopping for Handsome Flycatcher, Pacific Tuftedcheek, Olivaceous Piha, Nariño Tapaculo (which showed well), and an undescribed tapaculo (which did not).

White-headed Wren is one of the most handsome and unique members of the family.

We had lunch at the feeders which were great, bringing in a bunch of scarce and beautiful hummers like Violet-tailed Sylph, Greenish Puffleg, Velvet-purple Coronet, Booted Racket-tail, Purple-bibbed Whitetip, White-tailed Hillstar, Fawn-breasted Brilliant, and Empress Brilliant. After lunch,

we hiked up a different trail which was very steep but guite well-built, eventually reaching a canopy platform at the top of a ridge. Fog was coming and going, but finally in a clear patch we had our first views of a Gold-ringed Tanager (photo right), a very local Colombian endemic and the star bird of the reserve; it was also tied for "bird of the trip". We ended up seeing them several more times that afternoon, each time closer and better. We had a nice walk through beautiful forest. picking up a few more great birds like Toucan Barbet. Black-chinned Mountain-Tanager, Indigo Flowerpiercer, and Dusky Bush-**Tanager** before heading back to the lodge for the night.

The rare White-tailed Hillstar was visiting the feeders at the Tangaras reserve

Next morning was thankfully dry, and we staked out some lights next to the lodge at dawn waiting for the **Crested Ant-Tanagers** to come in. After a while, all we had seen was an **Andean Cock-of-the-rock**, and though it's impossible to be disappointed with that, it was looking as if the tanagers were not going to show. Right as I was about to give up, one did come in and we had great views of this amazing bird – given its appearance, it's not surprising that it has recently been transferred into the cardinals. We rode the jeeps back to the reserve and spent the morning on the trails again, finding **Plumbeous Pigeon**, **Spotted Barbtail**, **Fulvous-dotted Treerunner**, **Marble-faced Bristle-Tyrant**, **Slaty-backed Chat-Tyrant**, **Lemon-browed Flycatcher**, **Mountain Wren**, **Chestnut-breasted Wren**, and **Saffron-crowned Tanager**, among others. We had a hot lunch back at the lodge, where we finally saw some **Russet-backed Oropendolas** as well as surprising pair of **Variable Hawks** before driving the rest of the afternoon to the pleasant town Jardín, where we spent the next two nights.

There is fantastic cloudforest above Jardín, and it is the best known site for the endangered **Yellow-eared Parrot**. The parrots are most easily seen very early in the morning, so we got up in the dark and rode jeeps for a bit more than an hour up a very rough track to the reserve. Amazingly, an **Oncilla** was in the road on the way up, but only those in the first jeep were lucky enough to see it. It's one of the rarest and most beautiful of all Neotropical cats, and I have to admit it was my personal favorite sighting of the tour. We reached the pass at dawn, and had a picnic breakfast while

waiting for the parrots. Before too long, a small flock flew right over us, banked to the left, and came back right in front of us, catching the early morning sunlight, almost glowing. It was a remarkable sight and earned them a place with the other three "birds of the trip".

We stopped at the reserve HQ for few minutes to look at the hummer feeders, seeing **Tourmaline Sunangel**, **Speckled Hummingbird**, and **Collared Inca**. While there, we chatted with the reserve guard, who kindly showed a brand new trail that was supposed to be good for antpittas. There's no way we could turn up that chance! It was muddy and slippery but absolutely amazing. A **Chestnut-naped Antpitta** perched on a railing for us (earning a second-place vote), and a cute **Slate-crowned Antpitta** (*photo above*) came in almost close enough to touch. We also found **Rufous Spinetail**, **Citrine Warbler**, and **Lacrimose Mountain-Tanager** along the trail. We spent the rest of the day walking slowly down the road finding great flocks and seeing a ton of birds new for the trip, and I thought it was one of the best days of the trip. Here's a partial list: **Andean Pygmy-Owl**, **Long-tailed Sylph**, **Masked** 

Trogon, Yellow-vented, Golden-olive, and Crimson-mantled Woodpeckers, Whitebrowed Spinetail, Pearled Treerunner, Streaked Tuftedcheek. Montane Woodcreeper, White-tailed Tyrannulet, **Rufous-breasted** Flycatcher. Ashyheaded Tyrannulet, Rufous-crowned Tody-Flycatcher, Streak-throated **Bush-Tyrants**, Yellow-bellied Smoky Chat-Tyrant, Russet-crowned Warbler, Rufous-crested Tanager, Black-capped and Oleaginous Hemispinguses, Grayhooded Bush Tanager, Capped Conebill, Blue-capped Tanager, Grass-green Tanager, and Mountain Cacique. While driving back to the hotel in late afternoon, we even found an **Andean Motmot** perched on a wire (photo right) on the outskirts of town very unexpected, but it was great to see it so well.

With only one morning left, we had one more endemic to target. We left the hotel early, and reached some dry woodland near the Cauca River by dawn. After another field breakfast, we quickly found our quarry, the localized **Grayish Piculet** along with a **Streak-headed Woodcreeper**. We then

drove a few miles to another site and called in a pair **Speckle-breasted Wrens** – an endemic subspecies that will likely prove to be a separate species. Nearby was our only **Slate-headed Tody-Flycatcher** of the tour. Heading back to Medellín, we had time to visit a small reserve on the edge of the city where Yellow-headed Manakin had been reliable of late. Sadly we had no luck with the manakin, but it was a pleasant place to spend a few hours. We saw more **Red-bellied Grackes**, a noisy flock of **Green Jays**, and our only **Yellow-throated Vireo** before heading down to a great barbecue lunch to finish off a fun and productive tour.

#### **BIRD LIST**

This list includes all the bird species that were recorded by at least one of the group, including the leader. Taxonomy and nomenclature follow Clements, James F. *The Clements Checklist of Birds of the World.* Sixth Edition, 2007, Ithaca, NY: Cornell University Press, including all updates through August 2011.

Totals: 445 bird species seen, 44 heard only
