

A [Tropical Birding](#) SET DEPARTURE tour

## **ECUADOR: Hummingbird Extravaganza** **Part 2: The East**

31<sup>st</sup> May- 7<sup>th</sup> June 2024

**TOUR LEADER: José Illanes**

**Photos 7 Report: José Illanes**

**Giant Hummingbird** from Tambo Condor Restaurant

Our first *Hummingbird Extravaganza* was a roaring success. This was merely one part, Part 2: The East, and it amassed a list exceeding 40 hummingbird species! Of course, we viewed many other great birds too by covering from the high Andes down into the foothills of the mountains. On the hummingbird front, the most popular species were the tiny **Peruvian Racket-tail**, the massive **Giant Hummingbird**, the gorgeous **Gould's Jewelfront**, and the spectacular **Long-tailed Sylph**. Other heavily admired hummingbird species included **Napo Sabrewing**, **Chestnut-breasted Coronet**, **Rainbow-bearded Thornbill**, **Viridian Metaltail**, **Wire-crested Thorntail**, **Green-backed Hillstar** and **Black-throated Brilliant**.

Among the non-hummingbirds there was plenty to admire too, and the ones highlighted by the group at the end included **Green-backed Trogon**, **Torrent Duck**, **Andean Pygmy-Owl**, **Carunculated Caracara**, **Gray-breasted Mountain-Toucan**, **Golden-crowned Tanager**, **Andean Lapwing**, **Plain-backed Antpitta**, **Band-bellied Owl**, and fittingly too, Ecuador's national bird, the huge **Andean Condor**.

**Wire-crested Thorntail** at *Wildsumaco*

## TOUR SUMMARY: MAIN TOUR

June 1st: Antisana to Papallacta Hot Springs.

**Carunculated Caracara** at Antisana National Park

This tour was the second part of the *Hummingbird Extravaganza* that focused on the *east* side of the northern Andes. The previous night was spent in *Puembo*, conveniently placed for our visit to Antisana, which lies to the east of Ecuador's capital, *Quito*. Near the entrance to the park smoke from a local fire threatened to derail our plan to enter the park. However, the smoke lifted, and we entered Antisana as planned after all. This high Andean, open country, park provided us with some easy opening birding with typical highland species like **Stout-billed** and **Chestnut-winged Cinclodes**, **Black-billed Shrike-Tyrant**, **Plumbeous Sierra-Finch**, **Andean Tit-Spinetail**, and **Streak-backed Canastero** all being found during this opening spell. We also saw a series of raptors on the wing, including four **Andean Condors**, in addition to **Variable Hawk** and **Black-chested Buzzard-eagle**. These were all seeing as we drove up the road ever higher. Once we reached the open plateau, we added a series of other highland species, most notably, **Carunculated Caracara** (*photo above*), **Andean Lapwing**, **Andean Gull**, **Black-winged Ground-Dove** and the endangered **Andean Ibis** for which the site is famous for.

We also made a stop at a large highland lagoon, *La Mica Lake*, where we found **Andean Duck**, **Slate-colored Coot** and **Andean Teal**. Late in the morning, we located a roosting **Band-winged Nightjar**, and we also saw some of our first hummingbirds, with several female **Ecuadorian Hillstars**.

We took lunch at a local café (*Tambo Condor*), where some special hummingbirds were also in attendance too. However, the most unexpected sighting was a **Spectacled Bear** walking up the slope opposite the restaurant! On the hummingbird front, **Shining Sunbeams** (*photo below*), were the most visible, and competed with **Tyrian Metaltail**, **Black-tailed Trainbearer**, **Sparkling Violetear**, **Great Sapphirewing** and the enormous, starling-sized, **Giant Hummingbird** for a place at the feeders. After a wonderful local lunch with hummingbirds in attendance, we drove to *Papallacta Hot Springs* where we spent the night, with private hot tubs steaming just outside of our rooms!

**Shining Sunbeam** at *Tambo Condor*

**June 2nd: Papallacta Hot Springs, Cayambe-Coca National Park & Guango Lodge.**

The day's birding opened in the hotel garden, set within wonderful high Andean scenery. This enabled us to see **Grass Wren**, **Spectacled Redstart** and a handsome **Buff-breasted Mountain-Tanager**. We then took breakfast at the hotel before driving a little higher up into the paramo within *Cayambe-Coca National Park*. Our star find there was a dreamy male **Ecuadorian Hillstar** (*photo below*), though we also managed to see **White-chinned Thistletail**, **Scarlet-bellied Mountain-Tanager**, and **Tawny Antpitta**. In an area of *polylepis* woodland, the highest growing trees on Earth, we were fortunate to find a specialist of this habitat, a handsome **Giant Conebill**.

**Ecuadorian Hillstar** from *Cayambe-Coca National Park*.

By that time, lunch was calling, and so we visited *Guango Lodge* for both food and more hummingbirds. The main attendees at the lodge feeders were **White-bellied Woodstar**, **Chestnut-breasted** and **Buff-tailed Coronets**, **Long-tailed Sylph**, **Tourmaline Sunangel** and **Collared Inca**. Following this burst of new species, we decided to walk one of the lodge trails, specifically in the hope of finding an iconic Andean species, *Torrent Duck*. On our way down to the river, we came upon **Turquoise Jay** and **Andean Guan**, then got cracking looks at a photogenic male **Torrent Duck** (*photo next page*), once we reached the river. The final highlight of the afternoon came after we waited at some in-forest fruit feeders, which eventually brought in the hoped for **Gray-breasted Mountain-Toucan**, to cap off an extraordinary afternoon. The rain played with us some in the afternoon too, and so we retired a little earlier to our hot springs hotel.

*Torrent Duck* at Guango Lodge

### June 3rd: Cayambe-Coca National Park & Las Brisas; drive to WildSumaco.

After breakfast, we reluctantly checked out of our hot springs base, and drove up towards *Cayambe-Coca National Park*, this time investigating the *Oyacachi* entrance, which has some nice elfin forest near the park entrance. We managed to find a few high Andean hummingbirds there, some that we had seen before (**Great Sapphirewing** and **Shining Sunbeam**), and one that we had not (a female **Rainbow-bearded Thornbill**). We were also fortunate to see an **Andean Pygmy-Owl** up there. A mixed flock in this area also held **Golden-crowned, Scarlet-bellied and Buff-breasted Mountain-Tanagers**. We took lunch in a restaurant in the Andean town of *Baeza*, which was not too far from our next hummingbird-themed site, *Las Brisas*. It was raining during our visit there, though thankfully the hummingbirds did not seem to mind and we watched them from the comfort of a shelter. This site was lower in elevation than the others we had visited thus far, and so produced a swathe of cool new hummingbirds. Top billing came to **Geoffroy's Daggerbill** that visited the feeders, something this species generally does not regularly do. The other two specialties, we'd been hoping for there, also showed up: **Peruvian Racket-tail** and **Green-backed Hillstar**. **Fawn-breasted Brilliant, Tawny-bellied Hermit, Bronzy Inca, Long-tailed Sylph**, and **Speckled Hummingbird** also all turned up there during our visit.

**Buff-breasted Mountain-Tanager** from *Papallacta Hot Springs* & **Green-backed Hillstar** at *Las Brisas*

While most people reveled in the *hummingbird* photography, we also picked up some other birds on the property, like **Montane Foliage-Gleaner**, **Variegated Bristle-Tyrant**, **Barred Becard**, **Fulvous-breasted Flatbill** and the striking **Red-headed Barbet**. After that, we continued our journey to *WildSumaco Lodge*, breaking this with a stop in *Pachakutik* community to view a family of roosting **Band-bellied Owls**.

**Western Fire-eye** female at Wild Sumaco

#### June 4th: Wildsumaco Lodge.

A full day was spent around the wonderful *WildSumaco Lodge*. Unfortunately for us this day was a very rainy one, restricting most of our activities to immediately around the lodge. We started out before breakfast visiting one of the moth sheets beside the lodge, which attracted some interesting birds, most notably a **Chestnut-crowned Gnateater**! Other birds picking at the moths included **Black-billed Treehunter**, **Olive-backed Woodcreeper**, and **Western Fire-eye** (*photo above*).

An eclectic mix of hummingbird species also visited the porch feeders, and captivated us for some time; **Peruvian Racket-tail**, **Brown Violetear**, **Many-spotted Hummingbird**, **Fork-tailed Woodnymph**, **Golden-tailed Sapphire** (*photo below*), **Green-backed Hillstar**, **Black-throated Mango**, **Napo Sabrewing**, **Violet-fronted Brilliant**, **Green Hermit**, **Violet-headed Hummingbird**, **Gould's Jewelfront** and the stunning **Wire-crested Thorntail** were all seen either at the feeders or in the lodge garden.

**Golden-tailed Sapphire** at Wildsumaco

After lunch and a rest, we continued to bird from the lodge veranda, to avoid the continuing rain, which yielded **Chestnut-eared Aracari**, **Speckled Chachalaca**, **Yellow-throated Toucan**, and **Golden-collared Honeycreeper**. Once the rain slowed, we birded the roadside nearby, seeing **Green-backed and Masked Trogons**, and a nice assortment of striking tanagers, including **Blue-necked**, **Spotted**, **Golden-eared** and **Paradise Tanagers**. In spite of the day's heavy rains, we had still; managed to see some really nice hummingbirds and other Andean foothill species.

**Black-streaked Puffbird** at *Wildsumaco*

**June 5th: Wildsumaco area.** We spent the entire day around *WildSumaco* again, starting out by a different moth sheet than the one from the day before. This attracted **Plain Antvireo**, **Western Fire-eye**, **Black-faced Antbird**, **Black-billed Treehunter** and **Black-streaked Puffbird** (*photo above*), the latter being an undoubted highlight. Unfortunately, this day was also another rainy one, restricting us to around the lodge again. However, we did find some interesting birds all the same, like **Yellow-tufted Woodpecker**, **Russet-backed Oropendola**, **Russet Antshrike**, **Short-tailed Hawk** and even the striking **Andean Cock-of-the-rock**.

After lunch, we took a siesta time as the rain continued to lash down. Thankfully, the rain eased for our scheduled afternoon visit to a forest feeding station, which drew in **Plain-backed Antpitta** and **White-necked Thrush**, before the rain strengthened once more, as we headed back to the lodge for the night!

**June 6th: Amaru Pacha, Wildsumaco; drive back to Quito.**

This was the final day of Part 2 of the *Hummingbird Extravaganza*, and we started out by visiting nearby *Amaru Pacha Reserve*, close to the lodge. The star there was not a *hummingbird* but **Andean Cock-of-the-rocks**, half a dozen or more males of which were seen displaying there in spectacular fashion. They also had some interesting hummingbird feeders on the property, that held **Black-throated Mango**, **Long-billed Starthroat**, **Violet-headed Hummingbird**, **Glittering-throated Emerald**, **Black-throated Brilliant**, **Many-spotted Hummingbird** and **Great-billed Hermit**. After that, we returned to **WildSumaco** for one final lunch meal, after which we packed up and drove back to *Quito*. Some final birding around the veranda at the lodge gave us **Yellow-throated Toucan**, **Green-backed Trogon** and a group of **Many-banded Aracaris**. There was little of note on the journey back aside from a soaring **Black-and-chestnut Eagle**, which was a very fortunate find, and nice final bird for the tour!

**Andean Cock of the Rock** from *Amaru Pacha*

**Black-throated Brilliant** from Amaru Pacha

**Green-backed Trogon** from Wildsumaco Lodge

**BIRD LIST**

Bird taxonomy follows Clements, J. F., T. S. Schulenberg, M. J. Iliff, S. M. Billerman, T. A. Fredericks, J. A. Gerbracht, D. Lepage, B. L. Sullivan, and C. L. Wood. 2023.
